What have you done?

This week I finally finished moving into my new house. All of that extra work and running around is finally over and I can now spend more time focusing on school. I managed to get a raise at my job and also got the VA to help me cover the expenses of my abrupt move. As far as my personal life, things went well. In school I've started to understand the concepts of this class and am managing my time for work much better than before.

What am I doing?

This week I have already worked 32 hours in three days. Yesterday was a 16 hour day. Despite that, I have completed my assignments on time and planned ahead in order to have time to do so. I am currently preparing for a snow storm to trap me in my house for the weekend and making sure I plan to make the most of that time. I will have plenty of opportunities for research and development.

What's Next?

I plan on taking this weekend and really fine tuning a lot of my work. I need to get into the habbit of practicing my coding and even looking into new code to learn. All of them seem to have similarities that I'd like to explore. I'll have plenty of time this weekend to sit down and focus on that and doing more research. I plan to maximize my time.

How To?

I have two free days where I can just sit down and work all day. I have snacks and supplies so I don't even have to leave the house. I'm going to watch tutorials on Lynda.com and take codeacademy.com courses. Those are fun and will help me branch out from just doing C#. I would like to also learn and get a head start on other languages to assist me in the future.
